Experiment: Mobile Network Protocol Stacks Using Figma

1. Aim

To create a visual representation of mobile network protocol stacks using Figma, highlighting the key layers and their functions.

2. Software Used

- Figma (UI/UX design tool)

3. Procedure

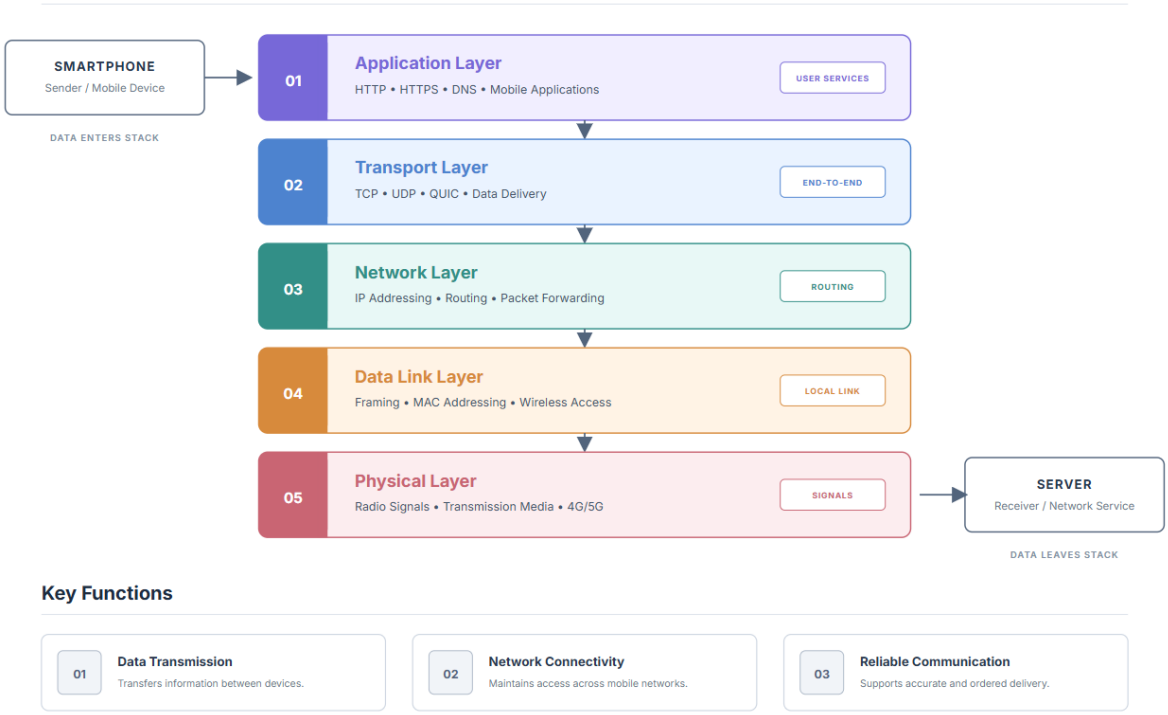

1. Open Figma and create a new design file.
2. Create a frame with a suitable size for the diagram.
3. Draw five rectangular layers representing the Application, Transport, Network, Data Link, and Physical layers.
4. Add the protocols and key functions inside each layer.
5. Use arrows, colors, and icons to show data transmission between a smartphone and a server.
6. Arrange all elements neatly and label each layer clearly.
7. Review the design and save the final prototype.

4. Design

The design consists of five vertically arranged layers:

- Application Layer: Provides services for mobile applications.
- Transport Layer: Supports end-to-end data communication.
- Network Layer: Handles IP addressing and packet routing.
- Data Link Layer: Manages frames and network access.
- Physical Layer: Transmits data through wireless radio signals.

Arrows connect the layers to illustrate the flow of data between a smartphone and a server.

5. Result

The visual representation of mobile network protocol stacks was successfully designed using Figma, illustrating the five protocol layers and their key functions in mobile communication.
